7.00mm (0.28 inch) White LED Display Single Digit 7-segment Surface Mount LED Display

Technical Data Sheet

Features

- High reliability.
- Low power consumption.
- Excellent characters appearance.
- Evenly lighted segments.
- Packaged in tape and reel for SMT manufacturing.
- The thickness is thinness than tradition through-hole LED display.
- I.C compatible.
- RoHS compliant.

E

Descriptions

- The KW1-S282CWA is a 7.00mm (0.28inch) digit height surface mount 7-segment LED display.
- The display provides excellent reliability in bright ambient light.
- The device is available as either common anode or common cathode.
- The device is made with white diffused segments and gray surface.

Applications

- Home and smart appliances.
- Instrument panels.
- Display time and digital combination.
- Test and measurement equipment.
- Control units.

Notes:

1. Luminous Intensity is a average value which is measured one 7-segment. Tolerance of Luminous Intensity: ±10%.

2. Excess driving current and / or operating temperature higher than recommended conditions may result in severe light degradation or premature failure.

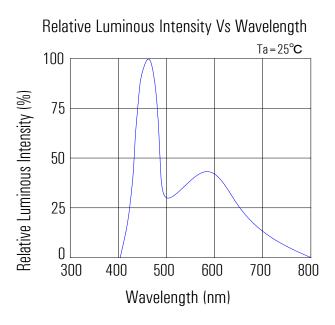

3. The chromaticity coordinates (x, y) is derived from the 1931 CIE chromaticity diagram.

Precautions for Use

1. Caution in ESD

Static electricity and surge damages the LED. It is recommended to use a wrist band or anti-electrostatic glove when handling the LED. All devices equipment and machinery must be properly grounded.

a. Reflow soldering is recommended. Other soldering methods are not recommended as they might cause damage to the product.

b. All parameters are maximum body case temperature values and cannot be considered as a soldering profile. The body case temperature was measured by soldering a thermal couple to the soldering point of LEDs.

c. No more than one reflow welding is recommended.

3. Recommended Soldering Pattern

4. Circuit Design Notes:

- a. Protective current-limiting resistors may be necessary to operate the LEDs within the specified range.
- b. LEDs mounted in parallel should each be placed in series with its own current-limiting resistor.
- c. The driving circuit should be designed to protect the LED against reverse voltages and transient voltage spikes when the circuit is powered up or shut down.
- d. The safe operating current should be chosen after considering the maximum ambient temperature of the operating environment.

Terms and conditions for the usage of this document

- 1. The information included in this document reflects representative usage scenarios and is intended for technical reference only.
- 2. The part number, type, and specifications mentioned in this document are subject to future change and improvement without notice. Before production usage customer should refer to the latest datasheet for the updated specifications.
- 3. When using the products referenced in this document, please make sure the product is being operated within the environmental and electrical limits specified in the datasheet. If customer usage exceeds the specified limits, Luckylight will not be responsible for any subsequent issues.
- 4. The information in this document applies to typical usage in consumer electronics applications. If customer's application has special reliability requirements or have life-threatening liabilities, such as automotive or medical usage, please consult with Luckylight representative for further assistance.
- 5. The contents and information of this document may not be reproduced or re-transmitted without permission by Luckylight.
- 6. The LEDs should be operated with forward bias. The driving circuit must be designed so that the LEDs are not subjected to forward or reverse voltage while it is off. If reverse voltage is continuously applied to the LEDs, it may cause migration resulting in LED damage.
- 7. Sundries and stains are controlled within 0.2mm, which can be passed.
