### **CAUTIONS**

#### **1. General**

- 1.1. Above specification may be changed without notice. LuckyLight will reserve authority on material change for above specification. When using this product, please observe the absolute maximum ratings and the instructions for use outlined in these specification sheets. LuckyLight assumes no responsibility for any damage resulting from use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets
- 1.2. DIP Type IR receiver modules can be mounted in any position. The leads may be bent, but the bend should not be less than 2mm from the bottom of the plastic package. During bending, force should not be transmitted from the leads to the package (e.g. by spreading the leads). If the device is mounted near heat generating components, the resulting increase in ambient temperature should not exceed the specified ratings.

#### **2. Storage**

- 2.1. The IR receiver modules should be used within a year
- 2.2. The devices are sensitive to damage due to moisture release if they are subjected to infrared reflow or a similar soldering process (e.g. wave soldering) without being properly dried. Be sure to observe the following storage conditions:
  - 2.2.1. Storage temperature 10 °C to 30 °C
  - 2.2.2. Storage humidity at 60 % RH maximum
- 2.3. The IR receiver modules used within 72hours after opening the package

#### **3. Soldering**

Protection against overheating is essential when a device is being soldered. It is recommended, where the design permits, that the length of the leads between the solder joint and the package be left as long as possible. The maximum permissible soldering temperature for plastic encapsulated devices is governed by the maximum permissible heat that may be applied to the plastic rather than by the maximum permissible junction temperature of the die.
