# Infrared Receiver Module 38kHz Carrier Frequency

#### **Technical Data Sheet**

#### Features:

- Photo detector and preamplifier in one package.
- Low voltage and low power consumption
- High photo sensitivity
- High protection ability against EMI
- Circular lens for improve the receive characteristics
- High immunity against ambient light
- Long reception range

Pb free and RoHS compliant

1/9

Compliance with EU REACH

#### **Descriptions:**

• The M5138 is miniaturized receiver for remote control systems. A PIN diode and a preamplifier are assembled on lead frame and molded into a black epoxy package which operates as an IR filter. The demodulated output signal can directly be decoded by a microprocessor.

#### **Applications:**

- AV equipment such as TV, VCR, DVD, CD, MD, etc.
- CATV set top boxes
- Multi-media Equipment
- Other devices using IR remote control

#### **Package Dimension:**

① Vout

② GND

3 Vcc

#### Notes:

- 1. All dimensions are in millimeters (inches).
- 2. Tolerance is ± 0.25 mm (.010") unless otherwise noted.
- 3. Protruded resin under flange is 1.00mm (.039") max.

#### **CAUTIONS**

#### 1. General

- 1.1. Above specification may be changed without notice. Luckylight will reserve authority on material change for above specification. When using this product, please observe the absolute maximum ratings and the instructions for use outlined in these specification sheets. Luckylight assumes no responsibility for any damage resulting from use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets
- 1.2. DIP Type IR receiver modules can be mounted in any position. The leads may be bent, but the bend should not be less than 2mm from the bottom of the plastic package. During bending, force should not be transmitted from the leads to the package (e.g. by spreading the leads). If the device is mounted near heat generating components, the resulting increase in ambient temperature should not exceed the specified ratings.

#### 2. Storage

- 2.1. The IR receiver modules should be used within a year
- 2.2. The devices are sensitive to damage due to moisture release if they are subjected to infrared reflow or a similar soldering process (e.g. wave soldering) without being properly dried. Be sure to observe the following storage conditions:
  - 2.2.1. Storage temperature 10 °C to 30 °C
  - 2.2.2. Storage humidity at 60 % RH maximum
- 2.3. The IR receiver modules used within 72hours after opening the package

#### Soldering

Protection against overheating is essential when a device is being soldered. It is recommended, where the design permits, that the length of the leads between the solder joint and the package be left as long as possible. The maximum permissible soldering temperature for plastic encapsulated devices is governed by the maximum permissible heat that may be applied to the plastic rather than by the maximum permissible junction temperature of the die.
